

Share Presentation with Customer

Jennifer M - 2023-10-04 - Projects & Presentation

Once you have finished [selecting the settings](#) and [updating the product information](#) for a presentation, you can share it with your customer via email or link. In the Presentations tab of the project, there is a "Share" button.

Can I download the presentation as a PDF? (click for answer)

Not at the current time.

Within the share button there are two options:

Share via Email

When sharing a presentation with a customer via email, the address in the customer's CRM record will be displayed. If no email address exists for this customer or you'd like to send to a different email, you can enter one in the Recipients box. The Subject Line and Message can be customized in the Email and Message Templates section of the Account.

Send email or copy link to share on your own.
